address. It is done with following command.

ip address 10.255.255.254 255.0.0.0

10.255.255.254 → IP-address
255.0.0.0 → subnet mask it is /8 network

Instead of writing /8, we need to use subnet mask with dotted decimal after the IP address.

- Next, we'll use 'no shutdown'. This is the command we use to enable interface. Default मा shutdown use हुन्छ, so यसलाई cancel गर्न we use no-st 'no shutdown'
- अब change भएको mssgs हरू aauxan. We can check it by 'do sh ip int br' do coz - we're in global-config ∴ we need to exec priv-exec commands

Some useful commands

- Show interfaces. - यसले last dherai info dinxa so, better jun interface हेर्ने यसको नाम लेखेर यदि गरियो
- Show interfaces g0/0 - This command shows primarily Layer 1 & layer 2 info about interface, but also some Layer 3 info.
- Show running config
- Show interfaces description -
  It has 4 columns. • Interface • Status • Protocol • Description
  Interface, status, deser Protocol aji jstai हो। Description is very helpful in identifying the purpose of each interface. To configure description Do following.
- Global config mode → interface g0/0 (int-config mode).
- Then type 'description your-description'. There aren't any rules to describe how to describe configure our interface.
